Montara Water Features

SITE-READY

Montara Water Features are commercial-grade systems designed for permanent installation with hard-wired electrical and plumbed water connections. Each unit includes three main components: the basin, tray, and bowl. Controls are not provided. We recommend two separate circuits and each with its own controls.

BASIN

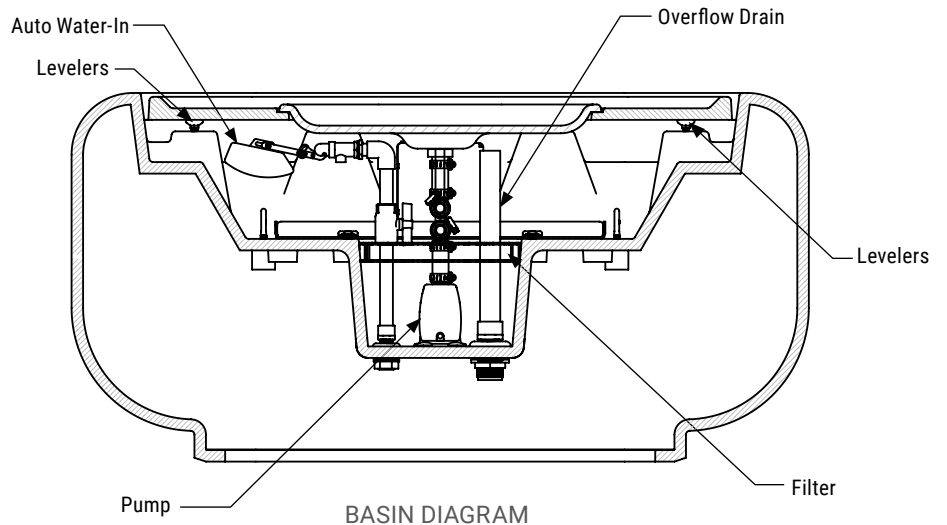

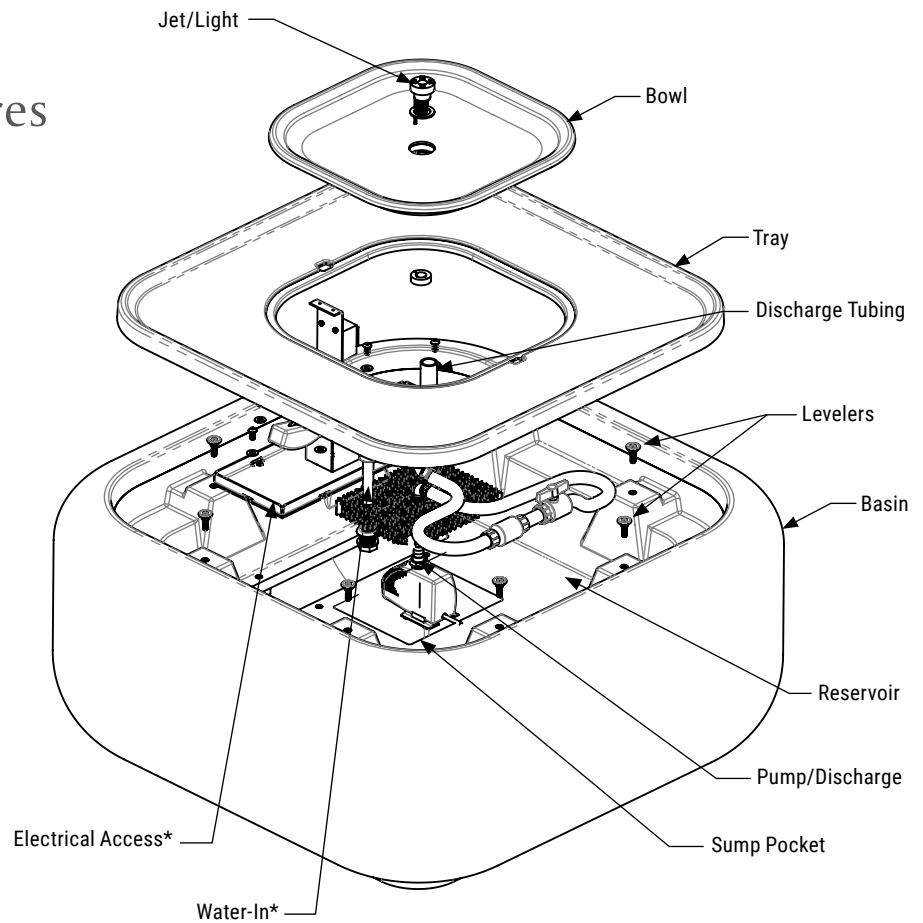

The basin houses all functional elements, including the pump, water jet, LED light, levelers, and reservoir, with dedicated space for on-site plumbing and electrical connections. The tray and bowl nest neatly inside the basin, where water collects and recirculates.

JET & LIGHTS

A low-profile water jet produces a gentle bubbling effect, while an integrated LED light illuminates the jet and casts a subtle glow within the bowl and tray. Water spills evenly over the tray's edge and returns to the reservoir, creating a continuous, calming sound of water flowing.

DOUBLE & TRIPLE

Double- and triple-configurations connect multiple basins into a shared reservoir. Basins need to be bolted together and sealed with caulk on-site. The multiple trays are independent and can be adjusted using levelers in the basin. Refer to Montara Water Features Assembly & Installation Instructions for more details.

*A licensed electrician and/or plumber is recommended to ensure safe, code-compliant installation and proper operation. Always check local requirements and permitting needs before purchase. Please refer to the *Montara Water Features Assembly & Installation Guide* for a complete list of tools and materials needed for installation.
