Recycled Plastic Lumber

Our recycled plastic lumber is a milk-bottle based, recycled plastic lumber which maintains its structure and durability.

This recycled plastic lumber is 90% recyclable, and 90% is post-consumer content and reduces the demand for virgin plastic or wood.

Utilizing recycled plastic lumber helps divert plastics from landfills, reducing environmental pollution and promoting waste management.

Reduction of Environmental Impact: Choosing recycled plastic lumber for park furniture and other applications helps minimize environmental damage by avoiding the depletion of natural resources and reducing energy consumption.

Durability and Longevity: Recycled plastic lumber is resistant to cracking, splitting, and rot, which enhances its lifespan compared to traditional wood materials, reducing the need for frequent replacements and conserving resources in the long term.
